**Generic Methodology for Developing a Non Standard-specific
Rationalised Information Flow and Storage System for
Computer-based Manufacturing**

By

Henry C.W. Lau

August, 1996

ABSTRACT

For a manufacturing company to become world competitive, it must, among other things, have an effective information processing capability. In today's environment, where there are a great variety of computer systems which an even greater variety of standards, the linking of computers to enable electronic data interchange is difficult and costly. This problem is addressed in this thesis with the development of a Generic, Non-standard Specific Information Flow System which enables computer users to select data which is to be shared in a company and store it in a common database from which it can be accessed by anyone in the company. The information in the common database is stored in a neutral format and the translation to and from this neutral format is done in the background by a Generic Format Translator, which has also been developed as part of this project. It is proposed that the information in the database is carefully selected to minimize memory requirements and speed up access time. A Generic Database Management System has been developed to control the data storage and retrieval processes. Trials of this package in industry have demonstrated that it is workable, cost effective and user-friendly.

TABLE OF CONTENTS

1.	INTRODUCTION	1
1.1	MRP-II and CAD	1
1.2	Generic Link	3
1.2.1	Ways to Achieve Linking of Systems	3
1.2.2	Linking of Groups of Systems	5
1.3	Traditional Way to Achieve Information Exchange	8
1.4	Generic Non Standard-specific Information Flow System	9
1.4.1	Features of a Generic Non Standard-specific System	10
1.4.1.1	Independence of number and types of computer systems	11
1.4.1.2	Ability to handle various computing operating systems	11
1.4.1.3	Ability to handle alphanumeric data items	11
1.5	Objectives of Research	12
1.6	Summary of Contents of Thesis	12
2.	LITERATURE REVIEW	15
2.1	Protocols and Communication Links	15
2.2	Needs for Standardisation of Communication Protocols	17
2.3	MAP/TOP - Their Roles in CIM	19

2.4	Networking Technology	21
2.5	File Transfer Programs	22
2.6	Standards Used in Design Area	23
2.7	Established Format Standards	24
2.7.1	STEP (ISO-10303)	26
2.7.2	Review on Format Standards	27
2.8	Database Management System	30
2.8.1	Various Types of Data Models	31
2.9	Data Exchange Among Computer Packages	34
2.10	Database Formats	37
2.11	Summary	39
3.	SPECIFIC LINKS	41
3.1	Introduction	41
3.2	AutoCAD to IMPCON	42
3.2.1	Data to be Transferred Between the Two Systems	43
3.2.2	Procedures for the Transfer of Design BOM	44
3.2.3	Programs for Data Transfer	45
3.2.4	Procedures of Using the Programs.....	46
3.2.5	Communication Software	48
3.3	Data Exchange in a Full CIM System	48
3.4	Information Flow System for Specific Linking of Systems	52
3.5	Communication Link Components	53

3.5.1	Communication Links for the Formation of a Full CIM System	54
3.6	Summary	55
4.	GENERIC LINKS	57
4.1	Introduction	57
4.2	Generic Link of CAD and MRP-II Systems	57
4.2.1	Neutral Data File	58
4.2.2	CAD Systems	61
4.2.3	MRP-II Systems	64
4.2.4	Establishment of Generic Link between CAD & MRP-II Systems	65
4.2.5	Generic Link of Systems to Form a Complete CIM	66
4.3	Proposed Generic Non Standard-specific Information Flow System (GNSIFS)	69
4.3.1	Specification of Input and Output Information	71
4.4	Generic Data Extraction System	74
4.4.1	Types of Files Used in Data Extraction Process	76
4.4.2	Logical Sequence of Data Extraction Process	76
4.4.2.1	Identify Data in System Datafiles	76
4.4.2.1.1	Variable Reference Text	81
4.4.2.2	Record Data Extraction Information in DEI File	84
4.4.2.3	Specify Files for Data Extraction Process	885

4.4.2.4	Extract Data Using DEI File	90
4.4.2.5	Put the Extracted Data in Component-related Datafile	91
4.4.3	Methodology of Generic Data Extraction	92
4.5	Generic Database Management System	99
4.5.1	DataBase Management System (DBMS)	99
4.5.2	Methodology for Developing RDBMS for Group A Data ...	102
4.5.3	Concept of Flexible DataBase Management System	103
4.5.4	Methodology for Developing a FDBMS	104
4.5.4.1	Create Component-related Datafile in Common Database	105
4.5.4.2	Store/Retrieve Data from Datafile	108
4.6	Generic Format Translator	111
4.6.1	Types of Data Formats	111
4.6.2	Functions of GFT	112
4.6.2.1	Automatic Conversion to Neutral Format	112
4.6.2.2	Conversion of Data to System Format	114
4.6.3	Methodology for Creating Generic Format Translator	115
4.6.3.1	Creating Automatic Translator to Neutral Format	116
4.6.4	Methodology for Creating User-defined Format Translator ..	118
4.7	Summary	120

5.	GENFLOW - THE APPLICATION PROGRAM	122
5.1	Introduction	122
5.2	General Description of GenFlow	123
5.3	Steps in Using GenFlow	125
5.3.1	Login	125
5.3.2	Data Group	126
5.3.3	Data Transfer	127
	5.3.3.1 Data Identification	128
	5.3.3.2 Data Extraction	131
5.3.4	Format Translator	132
5.3.5	External Program	134
5.3.6	Browser	136
5.3.7	Help	138
	5.3.7.1 Table of Contents	139
	5.3.7.2 General Windows Help Features	141
5.4	Summary	142
6.	TEST RESULTS AND DISCUSSIONS	143
6.1	Introduction	143
6.2	Evaluation of GenFlow in SACFM	143
6.2.1	Aims of GenFlow Evaluation in SACFM	143
6.2.2	Procedure	145
6.2.3	Results of GenFlow Evaluation at SACFM	150

6.3	Evaluation of GenFlow in N.S. Architects	151
6.3.1	Aims of GenFlow Evaluation in N.S. Architects	152
6.3.2	Method of GenFlow Evaluation in N.S. Architects	153
6.3.3	Results of GenFlow Evaluation in N.S. Architects	155
6.4	Using of GenFlow at Gerard Industries	157
6.4.1	Quality Problems at Gerard Industries	158
6.4.2	Three Stages of Implementation for Quality Improvements ..	158
6.4.3	Procedures for Implementing Stage One	159
6.4.4	Feedback for Using GenFlow at Gerard Industries	160
6.5	Cost Savings in Developing Conversion Programs	161
6.6	Summary and Discussions	163
7.	CONCLUSIONS AND FURTHER RESEARCH	166
7.1	Conclusions	166
7.1.1	The Neutral Format is an Essential Element of Efficient and Economical Data Exchange	166
7.1.2	The Source Files for All Data Must be Available in ASCII for GNSIFS to Work	167
7.1.3	The Generic Non Standard-specific Concept is Viable	167
7.1.4	Minimal Additional Programming is Required	167
7.1.5	Improve Productivity through Better Information Control ..	168
7.1.6	No Special Computer Skill needed to Use the System	168
7.2	Further Research	168
