SEDIMENTOLOGY OF THE LATE PRECAMBRIAN MUNDALLIO SUBGROUP : A CLASTIC-CARBONATE (DOLOMITE, MAGNESITE) SEQUENCE IN THE MT. LOFTY AND FLINDERS RANGES, SOUTH AUSTRALIA.

(VOLUME II)

by

ROBIN K. UPPILL, B. Sc. (Hons.) (Adelaide)
Department of Geology and Mineralogy,
The University of Adelaide.

FIGURES, TABLES, PLATES AND APPENDICES

Awarded 13th June 1980

REFERENCE

UMBERATANA GROUP

APPILA TILLITE — Massive pebbly mudstone

MUNDALLIO SUBGROUP

BURRA GROUP

UNDALYA QUARTZITE — Dolomitic sandstones, quartzites, minor siltstone and dolomite

YADLAMALKA FORMATION — Dark-grey dolomite mudstones and stromatolitic dolomites, light-grey dolomitic sandstones, cream intraclastic magnesite

NATHALTEE FORMATION
- UNIT 3 — Dark-grey massive shale overlain by white quartzite
- UNIT 2 — Green-grey shales, buff and pink stromatolitic dolomites and dolomite mudstones
- UNIT 1 — Grey dolomite mudstones and stromatolitic dolomites, grey siltstones, light-grey sandstones

EMEROO QUARTZITE — Quartzites, minor siltstones

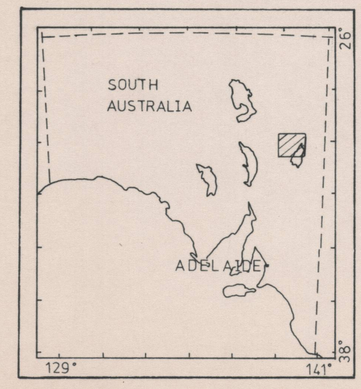
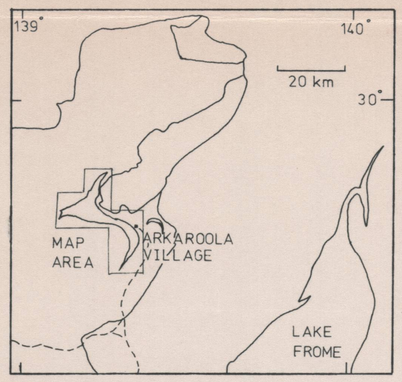
ARKAROOLA AREA





REFERENCE

UMBERATANA GROUP

- BOLLA BOLLANA FM. — Massive pebbly siltstones and sandstones
- MYRTLE SPRINGS FM. — Grey sandstones and siltstones
- YADLAMALKA FORMATION — Grey shale overlain by white quartzite

BURRA GROUP — MUNDALLIO SUBGROUP — NANKABUNYANA FORMATION

- UNIT 4 — Dark-grey dolomite mudstones, grey dolomitic sandstones and siltstones, cream intraclastic magnesite
- UNIT 3 — Massive grey shale overlain by sandstones and siltstones
- UNIT 2 — Grey dolomitic sandstones metamorphosed to calc-silicates in north, grey shales, white quartzites
- UNIT 1 — Brown and grey dolomites metamorphosed to white dolomite marbles north of Wywyana Creek, dolomitic sandstones metamorphosed to calc-silicates in north, grey shales, white quartzites

- WORTUPA QUARTZITE — Grey shales and sandstones, white quartzites, conglomerates in south
- OPAMINDA FORMATION — Quartzites, minor conglomerates and shales
- BLUE MINE CONGLOMERATE — Grey shales, dolomites, calc-silicates
- Conglomerates, sandstones

- Brecciated sediments
- Alkali granites in pipe-like bodies
- NH — Measured section
- Geological boundary
- Fault
- 60 — Dip and strike of bedding

W	White
B	Buff
P	Pink
R	Red
Br	Brown
Gr	Greenish Grey
Y	Yellow
YG	Yellow Green
C	Cream

SEDIMENTARY STRUCTURES

- Massive
- Flat lamination, thin bedding
- Wavy " " "
- Indistinct " "
- Medium to thick bedding
- Tabular cross-bedding
- Trough cross-bedding
- Ripple cross-lamination
- Climbing ripple lamination
- Disrupted bedding
- load casts
- Tepees
- Inverse graded bedding
- Domal stromatolites
- Columnar stromatolites
- Symmetrical ripple marks
- Asymmetrical " "
- Interference " "
- Desiccation Cracks
- Synaeresis Cracks
- Evaporite pseudomorphs
- 5 Maximum intraclast size in cm

LITHOLOGICAL BOUNDARIES

- Sharp
- Gradational
- Irregular
