## FOREWORD.

This paper has been divided, for convenience, into three main Sections - A, B, and C. The subject matter dealt with in each is as follows:-

### Section A.

- (a) Immunological Principles in general.
- (b) These principles as applied to vaccine administration.
- (c) The therapeutic administration of vaccines as conducted at the Adelaide Hospital Laboratory.

### Section B.

- (a) A classification is made of the various infections in which vaccines have been used.
- (b) Factors influencing the demand for vaccines are discussed.
- (c) The number of vaccines made, and the nature of the organisms used are represented in graph form.

### Section C.

- (a) The results of treatment by vaccines are shown in an analysis of 1083 case records.
  - (b) Conclusions are drawn.
-
