

Transnational Energy Projects and Green Politics in Thailand and Burma

A Critical Approach to Activism and Security

Adam Simpson

**Thesis submitted for the degree of
Doctor of Philosophy
in the
Discipline of Politics
School of History and Politics
The University of Adelaide**

Abstract

Most studies in environmental politics have traditionally examined three broad areas: the degradation of the environment; the regulatory regimes governing the environment; or environmental activism within the affluent North. This thesis provides an alternative perspective, exploring environmental activism in the less affluent South. In particular, while human rights and social justice perspectives have historically been largely absent from many environmental movements of the North, this thesis argues that, due to precarious living conditions and authoritarian governance, these issues are of primary importance for environmentalists in the South. As a result this thesis contends that most environmental movements in the South are part of a growing global justice movement and that important cultural diversities within this movement can result in novel forms of resistance and environmental governance. The focus here is on the emancipatory actors within these movements in the South who challenge existing power structures within society. Likewise, by adopting a critical perspective, this thesis argues that large business interests pursue energy projects in the South in the name of energy security and large scale industrial development that are often inappropriate for local development and security needs.

To test these hypotheses, four case studies were undertaken that examine transnational gas pipeline and large dam projects at various stages of their development which originate in either Burma (Myanmar) or Thailand. Empirical research, primarily in the form of interviews, undertaken in the countries hosting the various energy projects demonstrated that although environmental activists in the South were assisted by transnational activist networks there were also important local factors that impacted on the emancipatory philosophies, strategies and tactics of many activists in this region. These strategies have achieved some success, with environmental impact assessment (EIA) processes in Thailand now providing a potential opening for the political engagement of communities. Nevertheless, this thesis finds that the power of corporate interests in the international political economy often poses insurmountable barriers for activists to achieve both their short and long term aims. The findings suggest that despite the efforts of activists, local indigenous and ethnic minority communities continue to bear the brunt of the social and environmental costs of transnational energy projects in the South while receiving few of the benefits. Rather than safeguarding these communities from deprivation, these projects often exacerbate existing social tensions and conflicts, resulting in increased community insecurity.

Declaration

This work contains no material which has been accepted for the award of any other degree or diploma in any university or other tertiary institution to Adam Simpson and, to the best of my knowledge and belief, contains no material previously published or written by another person, except where due reference has been made in the text.

I give consent to this copy of my thesis when deposited in the University Library, being made available for loan and photocopying, subject to the provisions of the Copyright Act 1968.

I also give permission for the digital version of my thesis to be made available on the web, via the University's digital research repository, the Library catalogue, the Australasian Digital Theses Program (ADTP) and also through web search engines, unless permission has been granted by the University to restrict access for a period of time.

Acknowledgements

Many people have contributed to the development of this thesis in many ways and over many years. Tim Doyle, in particular, has been my central academic mentor and good friend since the mid-1990s when I undertook a Master of Environmental Studies at the University of Adelaide's Mawson Graduate Centre for Environmental Studies. The Centre was the starting point for several lifelong friendships and also mentoring by Elaine Stratford and Doug McEachern, who both played key roles in my early academic development. The passing of the Centre into the dustbin of history was a sad moment for many but the move by Tim, with myself as his doctoral student, into the School of History and Politics provided new friendships and opportunities. In particular Juanita Elias, who became my co-supervisor, provided indispensable advice and assistance throughout the development of this thesis and Clem Macintyre, as Head of Politics, was always supportive above and beyond the call of duty.

My gratitude must also go to activists across the South, particularly in Thailand and Burma, who helped me in my research. In particular, the activists in the NGO EarthRights International, including the co-founders Ka Hsaw Wa, Katie Redford and Tyler Giannini, have found time for me in their busy schedules for numerous interviews and communications over many years, for which I am enormously indebted. Many other activists cannot be identified for their own security but their courage in the face of adversity provides a constant source of inspiration. As I write these words unarmed democracy protesters are being massacred on the streets of Iran while the Burmese military pursues its military offensive in eastern Burma, resulting in a flood of refugees into Thailand. Hopefully the research in this thesis will make at least a small contribution to the awareness and understanding of these sorts of insecurities which many peoples in the South face every day.

Other people who have helped me over the years include my parents, Ann and Graham, and my brother, Giya, who have provided constant support through some rocky times. Adam Smith and Alex Hannell in London, Anton van den Hengel and many other good friends have provided sounding boards during many years of solving the world's problems in late night philosophical discussions. Vic Beasley provided some minor grammatical and formatting assistance in the later stages of the thesis. Thanks are due to my colleagues in International Studies at the University of South Australia for the mid-corridor debates, particularly Lis Porter who as Head of School showed faith in me and an interest in my research.

Lastly, Lisa and Kyela have provided me with unconditional love and support throughout the somewhat arduous and convoluted journey on which this thesis has taken us, and for that I am eternally grateful.

Notes on Language and Bibliography

Thai family names are often long and unfamiliar, even to other Thais, and both ethnic Burmans and most ethnic minorities in Burma (except the Chins, Kachins and Nagas) have no family name.

I have therefore followed the custom adopted by academics specialising in this region by citing Thai and Burmese authors in the text and bibliography by their first, rather than last, names (Brown 2004; Fink 2001, 270; Hewison 2005; Lintner 1999, 496; McCargo and Ukrist Pathmanand 2005; Warr 2005, xv).

Romanisation of Thai and Burmese names and words can result in several different spellings. I have endeavoured to maintain consistency throughout the thesis but where needed I have noted alternative spellings.

Acronyms and Key Terms

kWh is Kilowatt Hours (unit of energy consumption)

MWh is Megawatt Hours (unit of energy consumption)

Btu is British Thermal Units (unit of energy consumption)

MMBtu is 1 Million British Thermal Units (1,000,000)

(3412 BTUs = 1 kWh)

(1 BTU = 1,055.06 joules)

tcf is trillion cubic feet

mcf is million cubic feet per day

1 acre = 2.5 rai
