16th July, 1934.

Dear Fisher,

I enclose a suggested revised draft of the 6 x 6 L.S. paper. I have not had it retyped as a whole as you will very probably want to make some further modifications.

I find that we have made a mistake in the number of complete cycle Latin squares and that Jacob's formula is correct. The point we omitted is that some of the intramutations which leave the diagonal unchanged may generate different squares. In view of this there is presumably no point in giving the results you obtained for the number of intramutations which leave the diagonal unchanged.

I hope to be at U.C. on Wednesday afternoon to meet Mainland and will call in on you if you are not too busy.

Yours sincerely,
