

21st December 1933.

F. Yates Esq.,  
R. E. S.  
Harpenden,  
Herts,

Dear Yates,

I enclose a letter from Watson refusing to publish the paper on Latin Squares, You will remember I feared that we had made it rather long for that Journal, but I did not quite expect that their Referee would consider it scientific to use a method so intricate that it leads its author to the wrong result, rather than one so straightforward that it involves no new mathematical principles.

I enclose also a copy of my letter to Watson. I don't expect it will make any difference to him.

Yours sincerely,
