

15th. May 1950.

My dear Frank,

I am sending you a redraft with the last paragraph completely remodelled. Even if I knew how best to treat the statistical problem, which at the moment I do not, I should hate to load the chapter in *The Design of Experiments* with its discussion. None the less, I look forward to the time when I can say "the statistical difficulties and their solution have been discussed by Dr. Frank Yates," with a reference!

Yours sincerely,
