

May 18, 1938

Dear Dr Allen,

I am having sent to you a set of Fraser Roberts' papers from the Annals, covering, that is, what has been published so far on his work in Bath. I send also some references of work done previously (from my off-print collection), centred partly on genetics and partly on fleece analysis, which is more strictly biometrical. Probably Goodrich would be glad to have the Annals offprints and this, doubtless incomplete, bibliography.

I ought to have realised that foreigners also are eligible, and, under this head I would suggest that Timoféeff-Ressovsky has a very strong claim for consideration.

Yours sincerely,
