

April 15, 1936

My dear Anderson,

I am sending you a paper which I thought of putting into the Annals of Eugenics, on your Iris material. My excuse for putting it there being that this business of manufacturing linear compounds of multiple measurements to meet special requirements seems to have a good many applications to human measurements. Please correct if I have wrongly stated anything concerning the origin of the data and of the theory of allopolyploidy which I ascribe to you in Section 5. I am looking forward to seeing you in the Summer.

Yours sincerely,
