

September 7, 1938

Dear Bliss,

I am glad to hear that there are good prospects of your coming here again. As to your calculations, the sheets of which I return, I agree entirely with the principle of using time order and its square instead of the rows and columns of the original design. It will interest you that in the 2nd Edition I have shown a similar working in example 44 on strip blocks with a strong fertility gradient, though there I have left the block effect still eliminated.

We shall be glad to have your mailing list, as your offprints are waiting for it.

Yours sincerely,
