5th December, 1929.

Dear Dr. Fisher,

After some nine months of silence I again intrude upon you. Here are the results which have been got following the  $D^2$  business you outlined. I am very sorry that we have not been able to get more of the relationships properly filled up, some of them are very difficult to obtain. I wonder what you will make of these figures? There seems to me to be something interesting in them and I would be very grateful for your assistance if it is not asking too much.

Miss Robieon, who has done this work, is now making up  $D^2$  of a group of totally unrelated cows. It is a very laborious method.<sup>1</sup>

Yours sincerely,

*A. D. Buchanan Smith*
