

March 9, 1937

Dear Miss Day,

Many thanks for your letter and the numerous corrections, which have been put through on the printer's copy. I had, of course, intended to give your page of logarithms of Gregor's values. I think they will go best at the end, as table 18.

I was glad to get your offprint on the logging study, and I hope the nursery design for *Pondorosa* seedlings will not be spoiled; the danger is, when a plant experiment is brought down in size, that the design adopted should be even worse than if it had been originally planned on a smaller scale.

Yours sincerely,
