

Laboratorio Fitopatológico, Estanzuela, January 5, 1937.URUGUAY, S.America.

Dr. R.A. FISHER, Sc.D., F.R.S.
GaltonLaboratory
University of London.

Dear Dr.Fisher,

10 years have elapsed since I had the privilege to gather a first hand impression of the power of your methods in the Statistical Laboratory in Harpenden. I have endeavoured, though overwhelmed by the wealth of the succeeding editions of "Statistical Methods" "Natural Selection" and "Design of Experiments" to apply your tools to our phytotechnical problems, and am now forwarding to you the first volume of Archivo Fitotécnico del Uruguay, together with separate copies of papers dealing with experimental results to that statistical methods have been applied in my laboratory. - A German breeding review has taken interest and asked me to write an account and to give examples of statistical interpretation. This I would like to do under the title: "Beispiele für die Anwendung der statistischen Methoden von R.A.FISHER auf phytotechnische Fragen am La Plata", asking your kind permission to include small photographic reprints of your tables, in order to guide the readers to a better understanding and a fuller use of the original sources.

With best wishes for the year 1937,

yours,

sincerely,

G.J.Fischer
