

6th. December 1946.

My dear Henry,

Many thanks for sending me at once the data I had been looking for. Although I feel confident that the variant gene is not in our material associated with later or earlier appearance, yet I am sure it is worth while to examine fully the state of the evidence for these six years. I am getting on with the other work, but have been a little more delayed than I had hoped.

Yours sincerely,
