

5, APSLEY ROAD,  
OXFORD.

January 20<sup>th</sup> 1939.

My dear Fisher,

Yes, I can manage  
February 14<sup>th</sup> for a Seminar talk  
perfectly well. It is really quite  
as good as the Wednesday for me.

Would it suit you if  
we make the title Problems and  
Results of current Genetic Research  
in The Lepidoptera. It sounds  
rather long and clumsy, but it  
may perhaps provide the sort of  
thing one wants at a seminar.

I should like the chance of explaining  
a few results from my own work  
and work with which I am in touch,  
and of picking the brains of the meeting  
in regard to a problem or two!

The possibility of a  
discussion may perhaps become a  
rather disconnected talk.

Dordemall and I have  
written up one part of the Sully  
Island work. I wonder if Stevens  
has been able to explain his analysis.  
I must write to him.

Yours sincerely,  
E. B. Sill

I will bring a few specimens to  
illustrate what I have to say.
