

DEPARTMENT OF  
ZOOLOGY AND COMPARATIVE ANATOMY,  
UNIVERSITY MUSEUM, OXFORD.

March 9<sup>th</sup>. 1937.

My dear Fisher,

Would you be so kind as to let me have back the book of Cara data? Dowdeswell has promised the Entomologist some general notes on the insects taken, and would like to be able to refer to details recorded in it.

It is awfully good of you to have put in some work on the numbers. When he mentions X. monoglyphae, may he say that you found the elimination consistent with a population, with which the marked insects were mixed, very roughly of the order of 1,000, as you mentioned in your last letter?

It looks as if I shall not be able to get up for the Genetical Society meeting on the 18<sup>th</sup>., which I had particularly hoped to do. The practical of the zoology work of the New College scholarship group falls on that day, and they say it cannot be fitted into the time-table elsewhere: I am so sorry.

Yours sincerely,

E. B. Ford
