

25th June, 1951.

My dear Frechet,

Thank you for your letter. It is nice to hear from you again. I am enclosing one of three remaining copies of my old paper in the Mathematical Gazette on Randomisation, and an old enigma of card play. This I should certainly like you to have, either personally or in your department, even though I must deny myself the pleasure of giving many more copies away.

I hope all is well with you, as also with my friends Professor Darrois and Professor Daniel Dugue of Caen.

Yours sincerely,
