

27 February 1931.

Professor J. Stanley Gardiner,
Biological Laboratory,
CAMBRIDGE.

Dear Prof. Stanley Gardiner,

I shall be away in the States from June to August, but intend to return in good time for the B.A. Meeting.

I could easily draft a short talk of 20-25 minutes on differential birth-rates. I suppose you will want this for other speakers in the discussion, and I should be glad before talking to know in advance what the other speakers, at least those speaking before will be saying.

I could send you my draft, or alternative drafts as soon as you like.

Yours sincerely,
