Dr. R. A. Fisher,  
Department of Genetics,  
University of Cambridge,  
Cambridge, England.

Dear Dr. Fisher:

I have been exceedingly interested in your theory of the C-D-E elements to explain the several Rh blood groups. Not living in a large city I do not have the British journals available to use in following your work.

May I impose on your good nature to the extent of asking you if you would be so kind as to send me a reprint of some of your more important articles on the Rh factor? I am especially interested in the one in which you announce this theory, or a later one which describes it well.

If you know of any book or laboratory manual which includes this work with practical applications and actual directions for the laboratory technic, I would appreciate having you tell me where I might secure it and the price. We have nothing of this nature here as yet.

I am an obstetrician, not a hemotologist.

Very truly yours,

*Sherman S. Garrett M.D.*
