Dear Professor Fisher,

Thank you for your letter of 31st May.   The solution is certainly very simple in form, but as you say, tabulation, even for samples of equal size, would be laborious, as there appears to be no simple expression for the integral of the bi-variate distribution outside the permissible locus.   Quadrature would presumably be applied in any particular case.

Again many thanks for sending the solution.

Yours sincerely,

J. C. awood

Professor R.A.Fisher,
