

May 29. 43

Dear Fisher

WOODS HOLE, MASS.

My book on Human Genetics is now well advanced. With your permission I would like to publish Plate 4 from Fisher's paper on epicanthus and ptosis in *Mammals of Eugenics*, Vol. 1. I am glad to see publication of the Journal is going forward apparently unimpeded by the war. It is a long time since I heard from Mrs Hodson and I gather from her last letter that the Bureau has had to go into temporary abeyance owing to lack of funds. I hope there is now a definite prospect that the bequest funds which were in process of allocation will be available later.

I have found many papers in the
Annals, especially in the more recent volumes,
very useful in the preparation of this volume.

I wrote to you some months ago,
but either my letter or your reply must have
failed to arrive safely.

With kind regards

Yours Sincerely

R. Ruggles Gates

I was glad to learn from a Swiss letter that they
are continuing work on human heredity.
