May 12, 1941

Dr. R. A. Fisher
The Galton Laboratory
Rothamsted Experimental Station
Harpenden, Herts.
England

Dear Dr. Fisher:

Your letter of April 17 arrived today. Dr. Hayes and I wish to thank you for permission to reprint certain of your tables in the book which we are now preparing and hope to complete by July 1. I had a letter from Messrs. Oliver and Boyd this morning also, giving their permission.

Very truly yours,

F. R. Immer
Professor of Agronomy
and Plant Genetics

Mrs. Immer & I wish to express our deepest sympathy to Mrs. Foster and yourself over the loss of your son in the R. A. F.

We are given meagre information regarding how many planes we are building at present. During April we understood that about 1500 were produced. ^{FRI:M} That number should increase fairly rapidly as more factories come in to production. It is our understanding that about 80% of the planes are being sent to England. The government is careful not to release information on the actual percentage shipped. If you can't come over this year let us hope you can visit us after the war is over.
FRS.
