

18th June, 1959.

Mr. E. Irving,  
Geophysics Department,  
National University,  
CANBERRA, A.C.T.

My dear Ted,

I have just seen your great little paper on Paleomagnetic pole positions, from the Royal Astronomical Society's Geophysical Journal. I was delighted by the way you took all imaginable alternative hypotheses and demolished them seriatim. The diagrams are good, especially those on pages 70 and 71, and up to Figure 7 of the projections; Figures 8-17 are far too small for the amount of detail you have to show. I hope at least you will have lantern slides prepared appropriate to the most purblind in your audience.

I shall be in Canberra on 14th and 15th July and Henry Bennett is conspiring to get me to have a word to the chap concerned with Antarctica in the Department of Foreign Affairs. I do not know whether anything useful can be done.

Sincerely yours,

R. A. Fisher
