CAMBRIDGE.

23rd November, 1951.

My dear Jackson,

You are a chap for asking one for a dream as well as the interpretation thereof! i.e. I do not know how, on your views, you would set about predicting the distribution of flies recaptured within one milligram of their initial weight and you do not enlighten me as to your reasons for ~~this~~ *this* regarding flies recaptured which do not fulfil this condition.

Of course, I admit that significant difference, without too much regard to what it is significant of, can be demonstrated without such hypothetical scene painting, and it might, for example, be demonstrable that the mean interval for morstians is significantly different in one or both years from the mean interval for swynnertoni.

This letter cannot be any help to you, I am afraid.

Yours sincerely,
