Cayton,
York Road,
St. Albans.

8th January, 1930.

Dr. Keen,
Rothamsted Experimental Station,
Harpenden.

Sir,

I hold the appointment of Zoologist in the Department of Tsetse Research, Tanganyika Territory.

While on leave I wish to take a short course in statistical methods as applied to biology at Harpenden if that can be arranged.

The object would be to gain some general ideas on the principles governing the work being done, in order to acquire a sounder knowledge for application to treatment of fly and game numbers with which I have to deal.

For this purpose I propose to set aside the month of February, and should be glad to hear whether you can accommodate me. I should say that my knowledge of mathematics is elementary, and does not extend to the differential calculus.

I have the honour to be, Sir,
Yours truly,

(Signed) C. H. N. JACKSON.
