August 15, 1941

Dear Kendall,

I have now read your paper and have put it in for the next available Annals. It is quite excellent.

I had all your corrections save two, of which one, 1500 for 1200, in coefficient $k_4 k_3^2$ for the variance of k_5. I have just checked for $k(4\,2^3)$. I have failed to check 960 for 768 in the coefficient of $k_4 k_2^3$. I can only see two bipartitions

1 1 11	2 . 11
11 . .	1 1 . .
1 . 1 .	. 11 .
1 . . 1	1 . . 1
192	576

I am sending a fresh offprint with my corrections, so far as I have completed them.

Yours sincerely,

Offprint to follow
