

30th March, 1957.

My dear Kitagawa,

Thank you for thinking of sending me your paper for the Bulletin of Mathematical Statistics.

I have been myself thinking further about levels of uncertainty, and have sent to the Editor of Biometrics a note on one partial classification of these levels, with an application to the inferences appropriate to binomial data which I find rather surprising. I will send it you when I can.

Joan enjoyed her few days in Tokyo very greatly, especially the magnificent toy shops. I have since heard from her at Princeton.

Thank you also for sending me Dr. Yokoyama's address. I much hope that it may be possible, with his co-operation, to secure much of the original data on linkage in the silk worm.

My kind regards to Misao.

Sincerely yours,
