

3rd March, 1954.

My dear Kenneth,

I am very glad you think well of my suggestion for a Genetic Garden. I believe the A.R.C. might be wise to retain its freedom of action, making from time to time contacts with the University e.g. hiring from them, on some sort of renewable lease, some of the land at present unused, and in the territory of the Plant Breeding Station.

About Hayman; it would of course be a pleasure to act as examiner of his thesis.

Sincerely yours,
