

September 1, 1942

Dear Milne,

Excuse a short note in answer to your letter. I am glad you see your way to use the allowance for scraping off, and of course I shall be glad if you care to quote my letter. I do not see any objection to your comparing the \underline{t} values in the way you have done.

I think you are right that \underline{k} must be calculated by the summation of all the data, even though this prevents you from making independent estimates from different occasions. I shall be very much interested to see the results of your experience as it comes along.

Yours sincerely
