

16th November, 1953.

My dear Mourant,

I wonder if the secretor tests have yet been completed. I am asking particularly because we have in the class you kindly had done no less than five Lewis a-b-. It is true that four of these, if I remember right, are A's, but I expect you have by now some way over the difficulty of typing anti-Lewis b with A cells.

Besides, I should like my class to see the verification that all a+b- are not secretors.

Sincerely yours,
