Dear Taylor,

I am sorry Wednesday does not suit you. I shall be in Cambridge Thursday for the Creonian lecture, and I hope perhaps I may meet you. If not, please fix a day next week that suits yourself, if you are still thinking of making the trip, as I can conform to any day except Tuesday.

You might like to see the data which Professor Cappell of Dundee has just sent in. If I understand him rightly, his reject group are only persons whom it has been decided not to bleed. Consequently, I believe the whole can be taken together as a sample comparable at least to what we get from other places.

You will notice that, like Glasgow and Aberdeen, there are over 10% B; but what is unusual in this batch is the low percentage of A as compared, for example, with Q. In view of this low proportion the AB's show a slight excess in the women and are near expectation in the men.

Yours sincerely,

Dundee data - please return
