

11 April 1933.

Dr. C. Tedin,
Svalof,
Sweden.

My dear Tedin:

I should be glad to be of any possible use to you and your friend in the grass breeding work if by any means I can be so. What prevents me at present is that I cannot clearly reconstruct the algebraic specification of the two methods you have been discussing. If I might put you to the trouble to set out in a notation developed in Mr. Hopkin's letter exactly what processes you both have in view it should be possible to see either that one is right and the other wrong; or that they both come to the same thing, or perhaps that each is good for its own special purpose.

Yours sincerely,
