

17th. April 1946.

My dear Gerard,

It was so nice of you to think of sending me Martin Johnson's book on Art and Scientific Thought. The author really seems to have thought for himself and then developed an original point of view ^{with} ~~and~~ some penetration. I have not yet read it all, but have been, as you guessed, particularly interested in what he says about early science.

I wonder when you can make me a visit. Remember that any time that suits you it would be very welcome. I expect to be away from early June till mid August.

Sincerely yours,
