

28th November 1934

Dear Watkins,

I think you will find the fullest data on correlation in stature and other physical measurements in a big paper by Pearson and Lee, which appeared in one of the early volumes of Biometrika. The association between father and mother in this material is remarkably close, the ^{phen}patotypic similarity being roughly as great as between uncle and nephew and very consistent and significant.

Yours sincerely,

Dr A.E. Watkins,
School of Agriculture,
Cambridge.
