

5 October 1934.

A.E. Watkins, Esq.,
School of Agriculture,
Cambridge.

Dear Watkins,

My poultry experiment has progressed now far enough for me to be able to offer a paper to the Genetical Society for Nov. 23rd. As it would be a pity for me to take more than half an hour, if there is to be, as there should be, time for discussion, I can only deal with one, or two factors at the most, on this occasion. Let me know if you have time on your programme for this.

Yours sincerely,
